

1. Background

This figure displays three grouped bar sections representing domestic movements (blue bars), export movements (red bars), and import movements (patterned gray bars). Each bar represents the total short tons (in millions) for major commodity categories such as gasoline, crude petroleum, coal & lignite, manufactured products, and vehicles & parts.

2. Text Contrast

White axis labels and gridlines remain clearly visible against the black background. Category labels below the bars—angled for spacing—retain legibility, although long multi-word labels may be slightly dense for low-vision users. No embedded text appears within bars, maintaining clarity.

3. Graphic (Slice) Contrast

The chart uses distinct treatments for each group: solid blue for domestic commodities, solid red for exports, and patterned gray for imports. These visual differences effectively separate the three movement types. Category distinctions within groups rely on bar height rather than color, which is acceptable since each commodity appears only once per group.

4. Color-Blind Safety

The figure uses only three encodings: blue, red, and gray-hatch. All three remain distinguishable under the most common forms of color-blindness. The hatch pattern for imports provides a strong non-color cue. There is no reliance on hue alone for meaning, which aligns with ADA/WCAG recommendations.

5. OCR / Text Size

Axis titles, numeric labels, and commodity categories appear large enough for OCR extraction. The slanted commodity labels remain machine-readable although tightly spaced. No on-bar text simplifies OCR and avoids interference from patterns or color blocks.

6. Blur & DPI

The image is sharp and pattern fills are rendered cleanly. The diagonal hatch pattern maintains integrity at this resolution, though a DPI of ≥ 300 is recommended for print or inclusion in accessibility-focused documents to avoid moiré effects. Bar edges appear crisp with no visual artifacts.

7. Alt Text Recommendation

“ Grouped bar chart showing domestic (blue), export (red), and import (patterned gray) commodity movements in short tons, in millions. Domestic commodities such as gasoline, fuel oils, kerosene, and sand & gravel range from about 8 to 36 million tons. Export commodities include coal & lignite at over 60 million tons and smaller categories such as fuel wood and scrap materials. Import categories include gasoline, crude petroleum, manufactured products, and vehicles & parts, ranging from roughly 8 to 22 million tons. ”
