

1. Background

Figure 14 displays domestic (blue), export (red), and import (patterned gray) movements of major bulk commodities in short tons (millions). Commodity labels such as iron ore, limestone, coal & lignite, cement & concrete, petroleum coke, and salt appear across three functional groupings, with “ Domestic, ” “ Exports, ” and “ Imports ” labeled above their respective ranges.

2. Text Contrast

The axis labels and gridlines use dark gray on a white background, maintaining readable contrast. Commodity labels along the x-axis are angled and remain legible, though dense text may challenge low-vision readers. Section labels (“ Domestic, ” “ Exports, ” “ Imports ”) are placed at midpoint regions and remain clear.

3. Graphic (Slice) Contrast

The figure uses three visually distinct encodings: solid blue bars for domestic commodities, solid red bars for exports, and patterned gray bars for imports. These differences provide strong contrast. Category distinction within each color group is based on position and bar height rather than differing fills, which is acceptable for single-instance commodity categories.

4. Color-Blind Safety

The chart uses blue, red, and a patterned neutral tone—an accessible palette. Even under severe red–green or blue–yellow color-blind simulations, red vs. blue vs. gray-patterned bars remain distinguishable. The use of pattern for imports ensures non-color encoding, meeting WCAG/ADA requirements for perceptual differentiation.

5. OCR / Text Size

Axis text, category labels, and group labels are sufficiently large for OCR extraction. Angled labels are readable but may benefit from increased spacing in future versions. Since no text appears within bars, OCR tools can parse all relevant labels without obstruction.

6. Blur & DPI

The image is clear, and diagonal hatch patterns on imported commodities appear sharply rendered. Bar edges remain crisp and well-defined. For distribution in accessibility-focused documents or for printing, a 300-DPI export is recommended to avoid artifacts in fine diagonal patterns.

7. Alt Text Recommendation

“ Bar chart showing domestic (blue), export (red), and import (patterned gray) short-ton volumes in millions across major commodities. Domestic commodities include iron ore (~75M tons), limestone (~35M), and smaller categories such as coal & lignite and cement. Export categories include iron ore and limestone at lower tonnages, plus petroleum coke and salt. Imports appear as patterned gray bars for salt, sand and gravel, cement and concrete, iron and steel plates, and limestone, each under 10M tons. ”
