

1. Background

Figure 23 is a satellite-style geographic map depicting the **Persian Gulf region**, including Iran, Iraq, Kuwait, Saudi Arabia, Qatar, the UAE, and Oman. It includes a locator globe inset in the upper-right showing the region's global context.

PASS

2. Text Contrast

Most labels use white text against darker land or water, exceeding WCAG contrast. Some labels on light desert terrain are medium-contrast but still legible due to bold type. No critical features are lost due to color blending.

PASS

3. Graphic Contrast & Feature Clarity

Borders, coastlines, and geographic shapes are clearly defined. The locator inset uses grayscale contrast effectively. No overlapping labels obscure one another.

PASS

4. Color-Blind Accessibility

Natural-color satellite imagery does not rely on color-coding categories. Borders and labels remain interpretable regardless of color-vision deficiency.

PASS

5. OCR / Text Size

All country and waterbody labels are large enough for OCR. The inset 's ' Area in Detail ' label is smaller but still parseable.

PASS

6. Blur & DPI

Image is sufficiently sharp for digital viewing. For congressional print use, a ≥ 300 DPI raster is recommended to preserve coastline detail.

PASS

7. Alt Text Recommendation

“ Map titled ‘ Persian Gulf Region. ’ Shows Iran to the north; Iraq and Kuwait to the northwest; Saudi Arabia to the west and southwest; Qatar, the United Arab Emirates, and Oman to the south; and the Persian Gulf and Strait of Hormuz at center. A locator globe in the upper-right indicates the region ’ s position on Earth. ”
