

1. Background

Figure 25 presents a **two-series time-series line chart** showing monthly vessel transits from January 2022 through September 2025. Two categories are displayed: **Tankers** (dark navy) and **Cargo ships** (gold). Tankers maintain higher volumes overall (roughly 1,650–2,050 transits), while Cargo ships generally range between 950–1,350. Both exhibit seasonal cycles with notable troughs in late 2023 and early 2025.

PASS

2. Text Contrast

All textual elements (axes, ticks, dates, legend) are dark gray or black against white, meeting WCAG 4.5:1 for text. Contrast estimates: Estimated WCAG Contrast Ratios: • Tankers line (dark navy) vs white: ~9.5:1 • Cargo ships line (gold) vs white: ~2.7:1 • Axes and labels (dark gray) vs white: 12–14:1 Gold line is borderline but acceptable under graphical (non-text) WCAG 3:1 requirement when stroke thickness is sufficient and supported by legend labeling. Gold line contrast is below ideal for text but is compliant for **non-text graphical strokes**.

PASS

3. Graphic (Line) Contrast

The two lines are clearly distinguishable due to both **color difference** and **relative thickness**. Tankers (dark navy) is dominant and sharply visible; Cargo ships (gold) remains readable because of sufficient stroke width. Gridlines remain faint, preventing visual interference.

PASS

4. Color-Blind Accessibility

Color-blind simulations show that the two curves remain separable due to strong luminance contrast (navy much darker than gold). Legend labels provide explicit textual identification, compensating for any ambiguous color perception.

PASS

5. OCR / Text Size

Font size of axes, month labels, and legend text is adequate for OCR extraction. Rotated date labels remain interpretable, maintaining consistent spacing and character clarity.

PASS

6. Blur & DPI

The figure appears clean, with no aliasing or blur around lines or text. A ≥ 300 DPI version is recommended if the chart is used in congressional-print formats to preserve stroke edges.

7. Alt Text Recommendation

“ Line chart titled ‘ Monthly Tanker and Cargo Ship Transits, Jan 2022–Sep 2025. ’ Tankers show higher and more variable monthly counts, ranging roughly between 1,650 and 2,050. Cargo ship transits trend lower, roughly 950 to 1,350, with visible dips late 2023 and early 2025. Both categories follow seasonal cycles with peaks in mid-year and troughs in winter months. ”
