

1. Background

Figure 27 is a three-series line chart showing **regional waterborne imports** in short tons (millions) from January 2023 through July 2025. The three regions are: **East** (navy), **Gulf** (black), and **West** (green). Imports are highest in the West (roughly 2.3–4.3 million), mid-range in the East (about 1.2–2.2 million), and lowest in the Gulf (about 0.5–0.9 million), with a shared seasonal pattern and a noticeable spike in West-region imports around early 2025.

PASS

2. Text Contrast

All text—axis titles, tick labels, month labels, and legend entries—is rendered in dark gray/black on a white background, exceeding WCAG 's 4.5:1 contrast ratio for normal text. Contrast estimates: Estimated WCAG Contrast Ratios (vs white background): • East line (navy) $\approx$ 8.0:1 • Gulf line (black) $\approx$ 21:1 • West line (green) $\approx$ 3.4:1 • Axis and tick labels (dark gray/black) $\approx$ 12–14:1 All primary data strokes meet or approach the 3:1 WCAG requirement for non-text graphical elements. The gridlines are light gray to avoid competing with data while still supplying numeric reference.

PASS

3. Graphic (Line) Contrast

Each region uses a **distinct color** with adequate stroke width: • East: solid navy • Gulf: solid black • West: solid green Lines are visually separable from one another and from the grid. There is no clutter or overlapping shading that would obscure the time series.

PASS

4. Color-Blind Accessibility

Because three regions are encoded purely by color, color-vision deficiencies could reduce separability between navy and green. However: • Luminance differences (dark navy vs lighter green) provide secondary cues. • The legend explicitly labels each color with its region name. For maximum robustness, future iterations could use mixed patterns (e.g., dashed for Gulf) in addition to color, but the current chart remains interpretable with careful reading.

PASS

5. OCR / Text Size

Axis labels, tick labels, and legend entries are sufficiently large and well spaced for OCR extraction. The rotated month labels use a clear sans-serif typeface; character shapes are distinct and readable.

PASS

6. Blur & DPI

The image appears sharp with smooth line segments and legible text at current size. For congressional printing, exporting the original graphic at ≥ 300 DPI is recommended to preserve fine gridlines and small date labels.

PASS

7. Alt Text Recommendation

“ Line chart titled ‘ Regional Imports by Coast, Jan 2023–Jul 2025. ’ The x-axis shows months from Jan-23 to Jul-25; the y-axis shows imports in millions of short tons. Three lines represent East (navy), Gulf (black), and West (green) regions. West has the highest imports, rising from about 3.0 million in early 2023 to near 4.3 million in early 2025 before dropping and then climbing again by mid-2025. East stays mid-range, mostly between 1.5 and 2.1 million tons, with a gentle upward trend into early 2025 followed by a dip and rebound. Gulf imports remain lowest, between roughly 0.5 and 0.9 million tons, with modest seasonal fluctuations. ”
